

Task 4

Independent and correlated nested queries

Aim:

To implement and understand nested queries in SQL, including independent and correlated subqueries

PROCEDURE:

1. Create required table (eg guest-name, Reservations...)
2. Insert sample data
3. Write and execute independent nested queries
4. Write and execute correlated nested queries
5. Observe and analyze the differences in execution

Syntax:

```
SELECT John FROM Name WHERE SSN = 'CUST001';
```

Output: John

2. Correlated Nested Queries

Syntax:

```
SELECT g.GuestName
```

```
FROM GUESTS g, WHERE EXISTS (SELECT 1 FROM Reservations R  
WHERE R.GuestSID = g.Guest ID);
```

Output:

Guest Name
Reshma
Advaita
John

3. Independent Nested Query

Syntax:

```
SELECT RoomNumber, Price FROM Rooms WHERE Price > (  
SELECT AVG(Price) FROM Rooms);
```

Output:

Room Number	Price
101	7000

Correlated Nested Query

Syntax

```
SELECT M-Reservation ID, M-Total Bill FROM Reservation
WHERE M-Total Bill > (SELECT AVG (M2-Total Bill)
FROM Reservations M2
WHERE M2-Guest ID = M-Guest ID);
```

OUTPUT:

RESERVATION ID	TOTAL BILL
R1	4000
R3	5000

Sl. No.	
PERFORMANCE (5)	4
RESULT AND ANALYSIS	5
VIVA VOCE (5)	5
REPORT (5)	1
TOTAL (20)	15
WITH DATE	8/9

8/9
RESULT?

Thus the implementation of independent and correlated nested queries has been implemented successfully
